

another wiring product by...

NOTE: This harness routes inside of your trunk lid just as your old one did. The orange wire is a 12 volt fused battery feed that should be used as a trunk lamp or LED memory feed. The light green wires are your back up lamps. The yellow and brown (LH) wires and dark green and brown (RH) wires are your stop, turn, and tail lamps. The 4 position connector with lt. green, brown, yellow, and dk. green wires and the single position connector with the orange wire will plug into the rear body harness at the trunk hinge area.
