

In this kit you will find the following:

1. A cushioned clamp along with the hardware to mount it.
2. 2 rubber grommets.
3. Misc. connectors and terminals to complete engine, alternator, and forward lamp connections.

The installation of the clamp and attaching hardware can be found on page 7 of the main instruction sheet P/N 510126. The clamp will be used to securely route the harness up over top of the steering column saddle. The two grommets will be used to line the stock engine and forward lamp harness connection holes at the firewall prior to routing the new harness out into the engine compartment. The terminals and connectors will be used to complete the various connections under the hood of the car. Those detailed instructions can be found on pages 9 and 10 of the main instruction set.
