

In this kit you will find the following:

1. 2 rubber grommets.
2. Misc. connectors, terminals, switches, and ground wires to complete the engine, alternator, door jamb courtesy, and forward lamp connections.

The two grommets will be used to line the stock engine and bulkhead connection pass-thru holes at the firewall prior to routing the new harness out into the engine compartment. The larger grommet will be used to line the square hole where the stock 1969 bulkhead connector entered the engine bay. The smaller one will be used to line the round engine harness hole located in the upper center of the firewall. The terminals, connectors, and ground wire assemblies will be used to complete the various connections under the hood of the car. Those detailed instructions can be found on pages 9 and 10 of the main instruction set.
