

Classic Update Series

— 73-79 Ford F100-350 & 78-9 Ford Bronco —

START HERE !

PLEASE READ THIS BEFORE STARTING INSTALLATION !

This wiring kit is designed for ease of installation. Please read the guidelines below, BEFORE STARTING your installation to guarantee a successful job. Use an appropriate crimping tool which folds the wings of the open barrel terminals down into the wire as shown below. ALL TERMINALS THAT YOU INSTALL SHOULD BE PROPERLY SOLDERED. Our factory crimped terminations are installed by GM approved five ton presses, and soldering these terminations is not necessary. AAW offers a great terminal crimping video entitled "Proper Crimping Video". It can be viewed by visiting YouTube. Type the following address into your web browser to go directly to the video: www.youtube.com/watch?v=8u_EkMsioMy.

PLEASE READ THESE HELPFUL INSTALLATION TIPS BEFORE GOING ANY FURTHER!

Prior to installing the dash/main harness in your vehicle, plug all of the fuses, flashers, and horn relay (see a detailed description on page 8 of this instruction set) into the harness. Install the Dimmer, Headlight, Ignition and Wiper switches into their respective connectors on the harness assembly as well. These are all much easier to install onto the harness without the harness being installed in the vehicle. Once the switches and such have all been installed onto the harness, please use care when routing the assembly thru the vehicle as not to damage any of the switches by banging them into any metal supports or alike. See page 92970180, "1973-79 Fuse Panel Mounting Instructions", for some helpful hints on the installation and routing of the harness throughout the vehicle.

AS THIS HARNESS IS DESIGNED FOR USE IN A MODIFIED TRUCK REQUIRING A HIGHER RATE OF CHARGE, IT DOES NOT SUPPORT THE USE OF A STOCK (ORIGINAL) ALTERNATOR. IT IS DESIGNED FOR USE WITH AN INTERNALLY REGULATED GM "SI" STYLE OR SINGLE WIRE STYLE ALTERNATOR. ADAPTERS (WHICH ARE NOT INCLUDED WITH THIS KIT) THAT ARE AVAILABLE FROM SEVERAL SOURCES WILL BE NECESSARY TO USE ANY ALTERNATOR OTHER THAN A GM "SI" STYLE OR SINGLE WIRE STYLE UNIT.

STEP 1: DISCONNECT YOUR BATTERY:

Disconnect the battery before installing the wiring kit to prevent any accidental shorting caused by loose bare wire ends.

STEP 2: START INSTALLING KIT:

This kit is broken down into individual steps that are identified by a letter printed on the instruction sheets visible through each bag. These letters are the order of operation for installing your kit. Start with bag letter G, then H, etc. The order of installation is shown below. Use this main instruction sheet, 92970164, to complete the installation process.

G - 510343 Dash Harness Kit
H - 510344 Gauge Cluster Kit
M - 510345 Rear Body Kit

STEP 3: RECONNECT YOUR BATTERY:

When you have completed the installation and are ready to reconnect the battery, make sure that the following electrical system grounds are in place:

- A. Battery is grounded to the ENGINE BLOCK.
- B. Battery is grounded to the frame.
- C. Engine block is grounded to the frame.
- D. Body is grounded to the frame.

STEP 4: CHECK ALL ELECTRICAL FUNCTIONS:

Any non-functioning items should be checked for proper installation. Any problems with your wiring and electrical circuit functions should be addressed to American Autowire Systems, Inc. as soon as possible to avoid any warranty problems.

If you have any questions concerning this or any of our products, please feel free to call us at 1-856-933-0801.

 DESCRIPTION:
1973-79 Ford F100-350 & 1978-79 Ford Bronco Classic Update Series Kit
 92970164 instruction sheet rev. 1.0 1/21/2013

Dash/Main Harness Installation Instructions

The fuse box on the Dash/Main harness is designed to be mounted under the dash to the LH side of the steering assembly just as the original did using the same two mounting holes as the original. See sheet 92970180 for a photo of the finish mounted fusebox. The enclosed representation of the main dash harness shows each circuit branch and identifies each connection by its color and function. Follow this drawing and the detail drawings on pages 9 and 10 for individual circuit connections.

Circuit Branch 12 - LH Front Lighting Connections. See page 10, Figure C for typical connections. For loose piece terminals and connectors, see parts kit # 510352.

NOTE: For the 1973-74 applications, you will need to re-use your existing original park/turn signal leads and sockets (not included in this kit) as they are part of the parking lamp assembly and are not serviced separately. We have provided you with terminals W and connector V to assemble onto your existing parking lamp leads so that you can connect them onto the new AAW wire leads 9C and 14A below coming from the dash/main harness 510343 to complete your LH parking and directional circuits. For the 1975-79 applications, you will use the provided 1975-79 parking lamp extensions as shown on page 2.

Wire #	Wire color	Printing	Procedure
14A	Light Blue	Left Front Turn	This wire should ultimately be mated with the high intensity filament (white with a lt. blue stripe wire) of the LH front parking lamp. Route to the left front parking lamp area, cut to length, install terminal B and plug into connector R in the location as shown on page 10, figure C. Be sure that this light blue wire mates to the stock white with lt. blue stripe wire (73-74) or the red wire in the 75-79 parking lamp extension.
9C	Brown	Park Lights	This wire should ultimately be mated with the low intensity filament (brown wire) of the LH front parking lamp. Route this brown wire to the left front parking lamp area, cut to length, double it with the brown wire coming from one of the front side marker extensions, install terminal C, and plug into the empty cavity in connector R that you just plugged the light blue wire into as shown on page 10 figure C. Route the side marker assembly thru the access hole in the inner fender and secure the grommet that is installed onto the side marker assembly into that access hole so that the side marker wiring is protected from chaffing. Take the black wire with the ring terminal that is part of the front side marker assembly and attach it to a good known chassis ground. You may now plug in your LF parking lamp extension from the NOTE above and that will complete your LF turn/parking lamp and LF side marker lamp circuits. Select the light green Headlight Hi Beam wire (11A) and tan Headlight Low Beam wire (12). Route these wires to the LH headlight area, cut to length, install terminals A as found in kit 510352, and plug these wires into one of the front headlight extension assemblies (as shown on page 2) found on the dash/main wire kit, 510343. Take the black wire with the ring terminal that is part of the front headlight extension assembly and attach it to a good known chassis ground. Specific connection and orientation for this process can be found in the diagram on page 10, Figure C.
11A	Light Green	Headlight-Hi Beam	
12	Tan	Headlight-Low Beam	

Circuit Branch 12 - LH Engine Compt. Wiring. See page 10, Figures C and E for typical connections. For loose terminals and connectors, see parts kit # 510352.

Wire #	Wire color	Printing	Procedure
Back Up and Neutral Safety Switch Connections			
24	Lt. Green	Back Up Lt Sw	Route these wires to your neutral safety and back up lamp switch and connect them to the switch accordingly. If your truck has a manual transmission, connect the 5 and 6 wires together to complete the starter circuit. A typical aftermarket connection for your neutral safety and back up switch can be found on page 10, Figure E.
39C	Pink	12v Ign Fused	Switched feed from back up lamp switch to rear body connection.
5	Purple	Neutral Safety Sw	12v feed from solenoid post on the ignition switch to neutral safety switch.
6	Purple	Starter Solenoid	12v starter solenoid feed out from the neutral safety switch to the starter solenoid at branch 11.

Electric Speedo Connections

400	Yellow	VSS Ground	Connect to the Vehicle Speed Sensor ground lead.
401	Purple	VSS Signal	Connect to the Vehicle Speed Sensor signal lead.
402	Purple/White	VSS Power	Connect to the Vehicle Speed Sensor power lead if using a 3 wire sender.

(NOTE: Wires 400 and 401 must remain twisted together)

Electric fan Connection

300	Orange	Electric Fan	This is the 12 volt ignition feed to connect to the trigger wire on your electric fan relay (relay not supplied with this kit).
-----	--------	--------------	---

Windshield Washer Connection

94	Dark Green	(no printing)	This is the 12v feed from the wiper switch inside the truck out to the washer pump assembly under the hood.
----	------------	---------------	---

Brake Pressure Differential Switch

(NOTE:) We have provided you with the connection to a late model brake warning switch in the form of a wire pigtail assembly (wire 33A on page 2 of this instruction sheet). The old original stock Ford twin post switch is no longer available and has been replaced with the newer single post style switch. AAW recommends that you replace the older switch with the new replacement style switch. However, if you have a functioning twin post switch and wish to use it, simply cut the wires about 6 inches back from your old switch connector, double them together, and splice them into wire pigtail assembly 33A (from page 2 of this instruction sheet) to complete your brake warning circuit.

33B	Tan	Brake Switch	Route this wire to the brake warning switch area near the master cylinder, cut to length, install terminal B, plug into connector E as shown on page 10, figure C, then plug this wire into wire pigtail assembly 33A (from page 2 of this instruction sheet) to complete your brake warning circuit.
-----	-----	--------------	---

Circuit Branch 1 - Underdash Connections

Wire #	Wire Color	Printing	Procedure
Rear Body Connection			
9B,C	Brown	Rear Running Lights/ Park Lights	This connector will plug into the Rear Body Kit, 510345. Specific connections are addressed in that kit. These wires will pass out to the engine bay through the LH driver's side firewall grommet as seen on page 10, Figure C. Feed out from headlight switch for the tail and license lamps and feed out to the LH front parking lamp.
17B	Lt. Blue	Third Brake Light	Feed from the brake lamp switch for optional 3rd brake lamp.
18	Yellow	Left Rear Turn	Feed out to the LH rear stop and turn lamp from the turn signal switch.
19	Dk. Green	Right Rear Turn	Feed out to the RH rear stop and turn lamp from the turn signal switch.
24	Lt. Green	Back Up Lt Sw	Feed out to the back up lamps (if so equipped) from the back up light switch.
30A	Tan	Gas Gauge	Main fuel tank sender signal wire between the rear body and cluster connections.
40G	Orange	12v Battery Fused	12v battery feed for LED lamps.
131	Dk. Blue	(no printing)	Ground circuit for 4wd dash illumination lamp out to switch at the transfer case.

Fuse Box Assembly

Please see page 8 of this instruction set for fuse and flasher locations

www.americanautowire.com 856-933-0801

PART # **510342**
 DESCRIPTION:
 1973-79 Ford F100-350
 & 1978-79 Ford Bronco
 Classic Update Series Kit

92970164 instruction sheet rev. 1.0 1/21/2013

Dash/Main Harness Installation Instructions

Circuit Branch 1 - Underdash Connections

Wire # Wire Color Printing

Dimmer Switch		
10	Yellow	Dimmer Switch Feed
11A,B,C	Light Green	Headlight Hi Beam/ Hi Beam Indicator Light
12, 12A	Tan	Headlight Low Beam

Procedure

Plug this connector onto the new 500042 dimmer switch assembly.
12v Feed from H/L switch.
Switched 12v from dimmer to LH and RH high beam lamps, and to the dash cluster connector for the indicator lamp.
Switched 12v from dimmer to LH and RH low beam lamps.

Circuit Branch 2- Underdash Connection

Wire # Wire color Printing

LH Doorjamb Switch Connection		
40F,X	Orange	12v Bat Fused
53B,X	Lt. Blue	12v Ctsy Sw

Procedure

12 volt battery fused feed to the the LH doorjamb switch.
Switched 12 volt battery power for the dome lamp connection.

NOTE: LH door jamb switch installation procedure. You have been provided with a new doorjamb switch and pigtail (40X and 53X black leads) on your new Dash/Main harness. To install them, remove the new switch from the wire harness pigtail. Next, slide the silicone rubber seal back down off of the switch connector and route the hard shell connector and the seal and wire pigtail thru the threaded hole in your doorjamb assembly. Once this portion of the pigtail assembly is thru the threaded hole, slide the seal back up over the hard shell connector, then plug the doorjamb switch back into the connector and seal assembly, then thread the new doorjamb switch into the threaded hole.

Accessory Wire Connector

Use the mating connector that is plugged into the dash harness along with the loose piece terminals that are provided in the dash loose piece kit (510343) to make your power connections (not included with this kit) for any of the following optional equipment:

Fuse	Rating	Description
BAT 3	20 amp	Fused 12 volt BATTERY feed for any needed battery fused accessory
FUEL	20 amp	Fused 12 volt IGNITION feed for fuel pump or fuel flow valve (or other fused ignition circuit)
BAT 2	30 amp	Fused 12 volt BATTERY feed for power seats (or another fused battery circuit)
BAT 1	20 amp	Fused 12 volt BATTERY feed for power door locks (or another fused battery circuit)
PWRWDO	30 amp	Fused 12 volt IGNITION feed for power windows (or another fused accessory circuit)
ACCY 1	30 amp	Fused 12 volt ACCESORY feed (for any application)

Circuit Branch 3 - Underdash Connections

Wire # Wire color Printing

Dash Label Lamps		
8B,C	Gray	Dash Lights
150 & A	Black	Ground

Procedure

NOTE: These wires are used to illuminate the original headlight and wiper switch labels on the dash. **You will need to re-use your original lamp assembly.** Cut the original connector off of the stock lamp socket extension as close to the back of the connector as possible, install terminals B and plug into connector T from the 510352 kit. The original blue with red stripe wire will need to mate with the AAW gray "dash lights" wire, and the black wire will need to mate with the AAW black "ground" wire. Once you have installed the new terminals and connector onto your original lead wires, plug this connector into the mating connector on the AAW dash/main harness.

12v fused feed out from the fusebox to dash label lamp connection.
Chassis ground for dash label lamp connections.

Factory Dome, Map, Cargo Lamp Connection

40D,F	Orange	12v Bat Fused
53C, D	Lt. Blue	12v Ctsy Sw

These wires will be used to mate to your stock dome, map, or cargo lamp circuits.

12 volt battery feed from the headlight switch to the map or cargo lamp circuits.

Switched 12 volt battery lead to dome lamp assembly.

NOTE: You will need to re-use your original factory Dome/Map/Cargo lamp wiring that routes up your windshield pillar and on over to the lamps. Cut off the factory 2-way brown connector that is on the end of the original factory harness (which can be found under the dash in the LH door jamb/cowl area), install terminals B and plug into connector R from the 510352 kit. The original black with blue stripe wire will need to mate with the AAW lt. blue "12v ctsy sw" wire, and the original green with yellow stripe wire will need to mate with the AAW orange "12v bat fused" wire. The third cavity will remain blank. Once you have installed the new terminals and connector onto your original lead wires, plug this connector into the mating connector on the AAW dash/main harness.

Horn Relay

2D	Red	12v Battery
28	Black	Horn Relay Ground
29	Dk. Green	Horn

Plug the horn relay (found in the 510353 fuse kit) into this connector.

12 volt battery feed.
Relay ground circuit (to steering column).
Triggered 12 volts to horn.

LH Courtesy Lamp Connection

53A,C	Lt. Blue	12v Ctsy Sw
156A	White	Ctsy Ground

Plug in 1 courtesy lamp extension (as found on page 2 of this instruction set) to complete this circuit.

Switched 12 volt battery power for LH underdash courtesy lamp and feed over to the dome/map lamp connector.
LH underdash courtesy ground. Attach the ring terminal to a good known chassis ground.

Turn Signal Switch Connection

8C, D	Gray	Dash Lights
14A, B	Lt. Blue	Left Front Turn
15A, B	Dk. Blue	Right Front Turn
16	Purple	Turn Switch Feed
17A	Lt. Blue	Third Brake Lt.
17B	White	Brake Sw
18	Yellow	Left Rear Turn
19	Dk. Green	Right Rear Turn
27	Brown	Turn Sw Hazard
28	Black	Horn Relay Ground
28A	Black	Horn Relay Ground

Plug into steering column turn signal connection. If you are using a stock Ford steering column on your vehicle, refer to "Table A - AAW turn signal wires to stock turn signal switch wires" on page 8 for proper mating directions. This kit is designed to function with a GM style turn signal switch. Our connector mates to a 3 7/8 inch long plug used on 1969-1974 GM, IDIDIT, many other aftermarket steering columns. Starting from 1975 on up, the GM switch changed and began using a 4 1/4 inch connector. That connector is from the same family and uses the same terminals. By using the supplied mating connector and terminals located in the loose piece kit bag of this dash harness (510318), it is easy to adapt any steering column to the kit. The function of the wires are as follows:
12v fused feed out from the fusebox for dash illumination lamps on transmission selector at steering column.
LH front turn signal feed out to front light and dash cluster connections.
RH front turn signal feed out to front light and dash cluster connections.
Turn signal 12v feed into column from flasher.
12v feed for third brake light to rear body connector.
12v input from brake switch to turn switch for rear brake lights.
LH rear turn signal feed out to rear body connection.
RH rear turn signal feed out to rear body connection.
Hazard switch 12v feed into column from flasher.
Steering column horn ground to horn relay.
Steering column horn ground to horn relay. **Attach this wire to a good known chassis ground.**

31	Dk. Blue	Oil Pressure
33	Tan	Brake Light/Switch
35	Dk. Green	Water Temp Sender
121	White	Coil Tach
Connector C		
139	Pink/White	Speedo Power
151	Black	Ground
400	Yellow	VSS Ground
401	Purple	VSS Signal
402	Purple/White	VSS Power

In-Line Fuel Gauge Connection

30A	Tan	Gas Gauge
-----	-----	-----------

Circuit Branch 6 - Underdash Connections

Wire # Wire color Printing

Ignition Switch Connector		
2B	Red	12v Battery
3A	Pink	Ignition Feed
5	Purple	Neutral Safety Switch
Ignition Switch Accessory Ring Terminal		
4A, E	Brown	Ignition Sw Accessory/ Brn/White (no printing)
Ignition Switch Single Brown Connector		
33, 33B	Tan	Brake Light/Switch

Procedure

Attach this wire to a good known chassis ground. (Note: Do not attach this wire with the 151 wire at branch 5)
Chassis ground for instrument cluster and dash label lamp connections.

12v fused accessory feed connection. This 3 way connector can be used to plug in various accessories.

Plug this connector onto lighting switch 510264.
Unfused 12v battery feed to the lighting switch for headlamps, tail lamps, and dash illumination lamps.
Feed out to RH front parking and rear tail lamps at the rear body connector.

Feed to headlight dimmer switch for headlights.
Secondary fused 12v battery feed to lighting switch from fusebox to RH door jamb and map/cargo lamp switches.
Feed out from H/L switch to fusebox for dash lamps.
Switched 12 volt battery power from lighting switch to dome and underdash courtesy lamps.

Plug this connector onto the new 510346 wiper switch assembly.

12v fused feed for wiper switch assembly.
12v fused feed for washer pump lead.
Switched 12v lead out for wiper low speed.
Switched 12v lead out for wiper high speed.
Switched 12v lead out for washer pump.
Wiper motor park.
Wiper motor low park.

Procedure

Attach this wire to a good known chassis ground. (Note: Do not attach this wire with the 150 wire at branch 4)
Chassis ground for instrument cluster electric speedo connection.

These connections will plug into the Cluster Connection Kit, 510344. Specific connections are addressed in that kit.

Resistance feed from accessory on the ignition switch to the cluster for use with stock gauges.
12v fused feed out from the fusebox for dash illumination lamps to cluster connection.
Fused 12v Ignition feed to cluster connection for any aftermarket 12v gauges or stock warning lamps.
Gauge cluster ground to cluster connection.

12v feed to dash cluster for high beam indicator lamp to cluster connection.
12v feed to dash cluster for left front turn indicator lamp to cluster connection.
12v feed to dash cluster for right front turn indicator lamp to cluster connection.
In-line fuel sender signal to cluster connection.
Oil pressure signal from engine lead to cluster connection.
Ground for brake warning lamp to cluster connection.
Temperature sender signal from engine lead to cluster connection.
Tach sender signal wire from engine lead to the cluster connection.

Fused 12v Ignition feed for electric speedometer to cluster connection.
Electric speedometer ground to cluster connection.
VSS ground from engine leads to cluster connections for electric speedometer.
VSS signal from engine leads to cluster connections for electric speedometer.
VSS 12v fused power from cluster connections to engine leads for electric speedometer.

Plug this connector (30A) into the in-line #30 tan "gas gauge" wire and connector coming from the dash cluster connector B above if your truck has a single fuel tank. If your truck has dual fuel tanks, you will need to purchase the optional dual fuel tank harness P/N 510359. That harness will mate to this connector as well as the the in-line #30 tan "gas gauge" wire connector that comes from the dash cluster connector B to complete the fuel gauge circuits.
Gas gauge feed from the rear body connector.

Procedure

Plug this main connector onto the ignition switch 510053.

Battery feed to the ignition switch.
Ignition feed to fuse panel and ignition system.
Start feed to neutral safety switch.

After the ignition switch connector above is plugged onto the 510053 ignition switch, attach this ring terminal to the threaded accessory stud on the ignition switch using the nuts included with the switch.
Accessory feed to fuse panel and accessory resistance wire to cluster connector A from ignition switch.

After the ignition switch connector and ring terminal above have been plugged onto the 510053 ignition switch, plug this connector onto the single exposed blade on the ignition switch. This connection is a ground and will provide a bulb check for the brake warning lamp when the ignition switch is in the cranking position.
This connector plugs onto the ground blade on the 510053 ignition switch and is the bulb check ground for the brake warning circuit.

PART # **510342**
DESCRIPTION:
**1973-79 Ford F100-350
& 1978-79 Ford Bronco
Classic Update Series Kit**

92970164 instruction sheet rev. 1.0 1/21/2013

Circuit Branch 6 - Underdash Connections

Wire #	Wire Color	Printing	Procedure
NOTE: These wires are used to illuminate the original heater switch label on the dash. You will need to re-use your original lamp assembly. Cut the original connector off of the stock lamp socket extension as close to the back of the connector as possible, install terminals B and plug into connector T from the 510352 kit. The original blue with red stripe wire will need to mate with the AAW gray "dash lights" wire, and the black wire will need to mate with the AAW black "ground" wire. Once you have installed the new terminals and connector onto your original lead wires, plug this connector into the mating connector on the AAW dash/main harness.			
8D,E	Gray	Dash Lights	12v fused feed out from the fusebox to dash label lamp connection.
150B	Black	Ground	Chassis ground for dash label lamp connections.

Brake Switch Connections

40A	Orange	12v Battery Fused	Battery fused 12v feed to the brake switch.
17A	White	Brake Switch	12v feed out of the brake switch to the turn signal switch.

Circuit Branch 7 - Underdash Connections

Wire #	Wire Color	Printing	Procedure
NOTE: The stock wiring connector on the factory Ford wiper motor pigtail will need to be replaced with the AAW 4-way female connector S (found in the 510352 parts kit). Cut the molded Ford connector containing the 4 wires (red, white, blue, and black) from the stock pigtail, install terminals B (found in the 510352 parts kit) and plug into connector S maintaining color continuity with the mating 4-way male connector found on the dash/main harness at branch 7.			
91	White	(no printing)	Switched 12v lead out for wiper low speed.
92	Dk. Blue	(no printing)	Switched 12v lead out for wiper high speed.
95	Black	(no printing)	Wiper motor park.
96	Red	(no printing)	Wiper motor low park.

Heater Blower Switch Connection

NOTE: For the 1973 thru early 1978 (before serial number CA0001) built vehicles, connect the four 1-way brown connectors found on the dash/main harness containing the brown, red, orange, and light blue wires to the heater/blower switch as shown in Photo "A" on page 7. For late 1978 (after serial number CA0001) and all 1979 built vehicles, you will need to plug these wires into the 1978-79 Heater Blower Extension found below to the right (and also on page 2) of this instruction set. Please mate these wires as follows: Brown wire on the dash/main to the red wire on the extension, red wire on the dash/main to the dk. green wire on the extension, orange wire on the dash/main to the orange wire on the extension, and the lt. blue wire on the dash/main to the white wire on the extension. Once this is completed, you may plug the 1978-79 Heater Blower Extension onto your the heater/blower switch.

50	Brown	Heater AC Feed	12v switched feed for "on/off" power to your stock heater switch or aftermarket heat and A/C.
51	Red	(no printing)	12v switched power to blower resistor for heater/blower low speed.
52	Orange	(no printing)	12v switched power to blower resistor for heater/blower high speed.
72	Lt. Blue	(no printing)	12v switched power to blower resistor for heater/blower medium speed.

Radio Connections

43	Tan	Radio	12v fused accessory feed for radio "on/off" power.
99	Yellow	Clock Battery	12v fused battery feed for radio clock and memory or dash clock assembly.

Ashtray Lamp Connection

8E	Gray	Dash Lights	Plug this lead onto your original ashtray lamp lead (not included with this kit). 12v fused feed out from the fusebox to ashtray lamp connection.
----	------	-------------	---

Circuit Branch 8 - Underdash Connections

Wire #	Wire Color	Printing	Procedure
NOTE: Plug this connection onto your original lighter socket assembly (not included with this kit). 12v fused battery feed for the cigarette lighter.			
40B	Orange	(no printing)	

4wd Illumination Lamp

39E	Pink	12v Ign Fused	12v ignition feed to 4wd indicator lamp.
131	Dk. Blue	(no printing)	Ground wire from 4wd indicator lamp down to transfer case.

Circuit Branch 9 - Underdash Connections

Wire #	Wire Color	Printing	Procedure
NOTE: Plug in 1 courtesy lamp extension (as found on page 2 of this instruction set) to complete this circuit. 12v fused battery feed connection. This 3-way connector can be used to plug in various battery powered accessories.			
100A	Orange	(no printing)	

RH Courtesy Lamp Connection

53B,E	Lt. Blue	12v Ctsy Sw	Switched 12 volt battery power for RH underdash courtesy lamp and feed over to the RH door jamb switch connection.
156B	White	Ctsy Ground	RH underdash courtesy ground. Attach the ring terminal to a good known chassis ground.

RH Doorjamb Switch Connection

40E,Y	Orange	12v Bat Fused	12 volt battery fused feed to the RH doorjamb switch.
53E,Y	Lt. Blue	12v Ctsy Sw	Switched 12 volt battery power to the RH doorjamb switch from the RH courtesy lamp connection.

NOTE: RH door jamb switch installation procedure. You have been provided with a new doorjamb switch and pigtail (40Y and 53Y black leads) on your new Dash/Main harness. To install them, remove the new switch from the wire harness pigtail. Next, slide the silicone rubber seal back down off of the switch connector and route the hard shell connector and the seal and wire pigtail thru the threaded hole in your doorjamb assembly. Once this portion of the pigtail assembly is thru the threaded hole, slide the seal back up over the hard shell connector, then plug the doorjamb switch back into the connector and seal assembly, then thread the new doorjamb switch into the threaded hole.

Blower Motor Resister Connector

51	Red	(no printing)	Plug this connector onto the blower motor resister on your heater box (stock heater vehicles ONLY). 12v switched power to blower resistor from the blower switch for heater/blower low speed.
52	Orange	(no printing)	12v switched power to blower resistor from the blower switch for heater/blower high speed.
52A	Black	(no printing)	Feed out from the blower resistor to the blower motor.
72	Lt. Blue	(no printing)	12v switched power to blower resistor from the blower switch for heater/blower medium speed.

See page 7, Photo "A" for proper connector plug-in and orientation of Heater Blower Switch 50, 51, 52, and 72 wires (from above).

www.americanautowire.com 856-933-0801

PART # **510342**

DESCRIPTION:
1973-79 Ford F100-350 & 1978-79 Ford Bronco Classic Update Series Kit

92970164 instruction sheet rev. 1.0 1/21/2013

Circuit Branch 11 - RH Front Lighting Connections. See page 9, Figure A for typical connections. For loose piece terminals and connectors, see parts kit # 510352.

NOTE: For the 1973-74 applications, you will need to re-use your existing original park/turn signal leads and sockets (not included in this kit) as they are part of the parking lamp assembly and are not serviced separately. We have provided you with terminals W and connector V to assemble onto your existing parking lamp leads so that you can connect them onto the new AAW wire leads 9A and 15A below coming from the dash/main harness 510343 to complete your RH parking and directional circuits. For the 1975-79 applications, you will use the provided 1975-79 parking lamp extensions as shown on page 2.

Wire #	Wire color	Printing	Procedure
15A	Dark Blue	Right Front Turn	This wire should ultimately be mated with the high intensity filament (white with a lt. blue stripe wire) of the RH front parking lamp. Route this dk. blue wire to the right front parking lamp area, cut to length, install terminal B and plug into connector R in the location as shown on page 9, figure A. Be sure that this dark blue wire mates to the stock white with lt. blue stripe wire (73-74) or the red wire in the 75-79 parking lamp extension.
9A	Brown	Park Lights	This wire should ultimately be mated with the low intensity filament (brown wire) of the RH front parking lamp. Route this brown wire to the right front parking lamp area, cut to length, double it with the brown wire coming from the other front side marker extension, install terminal C, and plug into the empty cavity in connector R that you just plugged the dark blue wire into as shown on page 9, figure A. Route the side marker assembly thru the access hole in the inner fender and secure the grommet that is installed onto the side marker assembly into that access hole so that the side marker wiring is protected from chaffing. Take the black wire with the ring terminal that is part of the front side marker assembly and attach it to a good known chassis ground. You may now plug in your RF parking lamp extension from the NOTE above and that will complete your RF turn/parking lamp and RF side marker lamp circuits.
11C	Light Green	Headlight-Hi Beam	Select the light green Headlight Hi Beam wire (11C) and tan Headlight Low Beam wire (12A). Route these wires to the RH headlight area, cut to length, install terminals A as found in kit 510352, and plug these wires into the other front headlight extension assembly (as shown on page 2) found on the dash/main wire kit, 510343. Take the black wire with the ring terminal that is part of the front headlight extension assembly and attach it to a good known chassis ground. Specific connection and orientation for this process can be found in the diagram on page 9, Figure A.
12A	Tan	Headlight-Low Beam	

Circuit Branch 11 - Eng., Alt. & Power connections. See pages 9 and 10, Figures A and D for typical connections. For loose terminals/connectors, see parts kit # 510352.

Wire #	Wire color	Printing	Procedure
6	Purple	Starter Solenoid-S	Connect the end that comes out with the heavy red power wire 2A to the "S" terminal on your starter solenoid as shown on page 9, figure A.
2A	Red	12 V Battery	Route the end of this wire that comes out with the purple wire 6 from above to your starter solenoid. Cut to length, install terminal C, and plug into connector E as shown on page 9, figure A. As shown on page 10, Figure D, plug connector E into the connector on the loose piece brown fusible link wire 2J, then attach the ring terminal on this assembly to the battery terminal on your starter solenoid to complete the main power circuit.
2	Red	12 V Battery	Route this wire to your starter solenoid and connect the ring terminal end with the blue fusible link to the battery terminal on the starter solenoid. Route the other end to the alternator battery stud, install sleeve D followed by terminal L, slide sleeve D back up onto terminal L, and attach this completed assembly to the battery power stud of the alternator as shown on page 10, figure D.
2H	Light Blue	Fusible Link	Alternator power circuit protection. Spliced onto wire 2. See the connection instructions under wire 2 above.
2J	Brown	Fusible Link	Main power circuit protection. See the connection instructions to wire 2A on page 10, figure D.
2G	Red	(no printing)	GM style "SI" alternator connector. See the connection instructions on page 10, figure D.
4D	Brown	Alternator Ign	NOTE: If you are using a one-wire alternator, the 4D wire below will not be used, so tape it back to the trunk of the harness as it has 12v accessory voltage on it. This wire is the exciter wire for your alternator / voltage regulator. It DOES NOT have any resistance on it as most stock exciter feeds do. If this wire is used, an in-line diode or resistor (not included with this kit) will be required between this wire and the alternator plug-in (wire 2J) to eliminate "run on" when the vehicle is switched off.
3F	Pink	Ignition Feed - coil	This is your 12 volt switched power source for the distributor/coil. This can be connected directly to the "bat" terminal on a typical HEI distributor, to a ballast resistor as in a points type distributor, or be used as the ignition power source for an aftermarket ignition module such as an MSD or "Duraspark" module. See the installation instructions for the type of distributor you are using for specific connection requirements. If you are using a GM style HEI distributor, terminal C and connector P have been provided to make that connection (See page 9, Figure A for some examples).
121	White	Coil - Tach	This can be connected directly to the tach terminal on a typical HEI distributor, to the negative side of the coil, or a tach connection in an aftermarket ignition module such as an MSD module. If you are using a GM style HEI distributor, terminal B and connector Q have been provided to make that connection (See page 9, Figure A for some examples).
31	Dark Blue	Oil Pressure Sender	Connect to the oil pressure sender (See page 9, figure A for some examples).
35	Dark Green	Water Temp Sender	Connect to the temperature sender (See page 9, figure A for some examples).
39D	Tan	Electric Choke	On carbureted vehicles, connect to the electric choke terminal (no mating terminals or connectors have been provided to make this connection).

Horn Connection
29 Dark Green Horn
Route this wire to the RH horn, cut to length. If you have one horn, install terminal B and plug into connector N as shown on page 9, figure A. If you have 2 horns, double that wire with the cutoff portion, install terminal C and plug into connector N as shown on page 9, figure A. Route the loose end of that wire over to the LH horn, cut to length, install terminal B and plug into connector N as shown on page 9, figure A. Plug these completed wire connections onto your horns to complete your horn circuit(s).

Blower Motor Connection
52A Black (no printing)
If your truck is a stock heater only vehicle, plug this wire directly onto your factory original blower motor pigtail lead. For some later applications, the factory original blower motor pigtail may have a blade style terminal (or female bullet terminal just as this AAW blower motor lead has). In those instances, simply cut the terminal off of your stock pigtail lead, install sleeve J and terminal U onto your original wire, then slide sleeve J back up over terminal U. Once this is completed, you will be able to plug your original lead onto the new AAW blower motor wire.

PART # **510342**
DESCRIPTION:
1973-79 Ford F100-350
& 1978-79 Ford Bronco
Classic Update Series Kit

92970164 instruction sheet rev. 1.0 1/21/2013

FUSE AND FLASHER LOCATIONS

NOTE: Above, you will find a photograph of the completed fusebox assembly depicting the proper location for the installation of each fuse and the two flasher cans.

“Table A”

AAW Turn Signal Switch wires to stock **1973-77 (all)** and **1978-79 (with speed control)** Ford Truck turn signal switch.

AAW Wire #	AAW Wire color	AAW Wire Printing	Ford Wire Color
8A,B	Gray	Dash Lights	Lt. blue with red stripe.
14A,B	Light Blue	Left Front Turn	Green with white stripe.
15A,B	Dark Blue	Right Front Turn	White with blue stripe.
16B	Purple	Turn Switch Feed	Blue.
17A,B	Blue & White	Brake Switch	Red with black stripe.
18	Yellow	Left Rear Turn	Yellow with black stripe.
19	Dark Green	Right Rear Turn	Dark Green.
27B	Brown	Turn Sw - Hazard	White with red stripe.
28	Black	Horn Relay Ground	Blue with yellow stripe.
28A	Black	Horn Relay Ground	Not applicable.
N/A	N/A	N/A	Blue with black stripe (Ford 151 wire).

NOTE: For these vehicles, the stock Ford steering column horn button switched ground to a horn relay just as the AAW system does. Therefore the 28A wire is not necessary and will not be used. The blue with white stripe 151 wire on your Ford schematic is for your stock Speed Control which is not supported in this AAW kit.

“Table A”

AAW Turn Signal Switch wires to stock **1978-79 (all without speed control)** Ford Truck turn signal switch.

AAW Wire #	AAW Wire color	AAW Wire Printing	Ford Wire Color
8A,B	Gray	Dash Lights	Lt. blue with red stripe.
14A,B	Light Blue	Left Front Turn	Green with white stripe.
15A,B	Dark Blue	Right Front Turn	White with blue stripe.
16B	Purple	Turn Switch Feed	Blue.
17A,B	Blue & White	Brake Switch	Red with black stripe.
18	Yellow	Left Rear Turn	Yellow with black stripe
19	Dark Green	Right Rear Turn	Dark Green.
27B	Brown	Turn Sw - Hazard	White with red stripe.
28	Black	Horn Relay Ground	Yellow.
28A	Black	Horn Relay Ground	Blue with yellow stripe.

NOTE: For these vehicles, the stock Ford steering column horn button switched 12v power directly to the horns. This AAW kit switches ground through the steering column horn button, which grounds a horn relay that switches the power to the horns. Therefore the 28A wire is needed, and will need to be used in this application. Please attach the ring terminal on this wire to a good known chassis ground.

PART # **510342**
 DESCRIPTION:
 1973-79 Ford F100-350
 & 1978-79 Ford Bronco
 Classic Update Series Kit

92970164 instruction sheet rev. 1.0 1/21/2013

NOTE: The terminals and connectors listed on this page and denoted with **UPPER CASE LETTERS** are to help you complete the various connections to your lamps, engine connections, switches, horn, etc. They can all be found in your loose piece clamp, grommet, and parts kit, P/N 510352.

The identifications, colors, and functions for all of the wires listed in "Figure A" on this page can be found on page 7, branch 11 of this main instruction set (9270164). AAW suggests and recommends using pages 7 and 9 to complete the installation of the RH forward lamp, turn, various engine functions, alternator ignition, starter solenoid, and blower motor connections.

This AAW kit is engineered to work with a stock heater system and most aftermarket manufacturer's heating and air conditioning systems. As such, we have provided a keyed 12-volt feed to use as the "OFF / ON" (AAW brown 50 wire) power source for whatever system you choose to purchase. The manufacturer will supply you with a harness for their system and instructions on how to connect it. In the event you are utilizing a stock heater system in your truck, we have also provided wires that will run from your heater switch to your heater resistor and then on to your blower motor. See the photo of the switch connections on page 7. We have also included a 1978-79 heater switch extension in the event that you are working on one of those trucks. See the instructions on page 6 that will explain how to plug that extension onto your dash/main harness.

PART # **510342**
 DESCRIPTION:
 1973-79 Ford F100-350
 & 1978-79 Ford Bronco
 Classic Update Series Kit

92970164 instruction sheet rev. 1.0 1/21/2013

Figure "A", Branch #11
 Passenger's Side Location

NOTE: Install one of the (2) large main grommets G that have been included in the 510352 kit into kit into passenger's side firewall pass thru opening, then pass the wiring from branch 11 thru that opening with the grommet installed in it. After completing these tasks, apply silicone sealer to this area to make a weather tight seal.

These wires are all found at branch 11, page 7

RH headlamp, RH parking lamp, engine, main power, alternator ignition, and starter solenoid connections.

Figure "C", Branch #12 Driver's Side Location

NOTE: Install one of the (2) large main grommets G that have been included in the 510352 kit into driver's side firewall pass thru opening, then pass the wiring from branch 12 as well as the wiring from the 510345 rear body kit thru that opening with the grommet installed in it. After completing these tasks, apply silicone sealer to this area to make a weather tight seal.

NOTE: The terminals and connectors listed on this page and denoted with **UPPER CASE LETTERS** are to help you complete the various connections to your lamps, brake warning switch, electric fan, back up and neutral safety switch, washer pump, etc. They can all be found in your loose piece clamp, grommet, and parts kit, P/N 510352. No terminals are provided for the neutral safety or back up switch connections.

The identifications, colors, and functions for all of the wires listed in "Figures C, D, and E" on this page can be found on page 3, branch 12, and page 7, branch 11 of this main instruction set (92970164). AAW suggests and recommends using pages 3, 7, and 10 to complete the installation of the LH forward lamp, turn, brake warning switch, electric fan, neutral safety and back up switch, washer pump, alternator exciter and power connections, and the main power feed.

AAW kits are all engineered to be used in conjunction with a high output, later model internally regulated, or one wire alternator. We do not suggest or support the use of a stock low amperage alternator as they do not supply sufficient current to recharge the battery in a highly modified truck such as this kit was designed for. AAW suggests a Ford Gen III, a GM "SI", or a 1 wire type alternator as good choices to use. An adapter to complete the connection to the Ford Gen III style alternator (AAW p/n 500802) may be purchased separately. Contact AAW for your needs.

LH headlamp, LH parking lamp, horn, washer, electric fan relay trigger, brake switch, neutral safety, and back up connections.

Main system power feed and alternator connections.

Figure "E" Shown is a typical NSS and Back Up Switch.
