

Terminals used in this installation.

This kit contains a supply of loose piece terminals to complete the connections to the required switches and light assemblies. We have supplied more than the required amount of these terminals in the event that extra terminals are necessary. Each connection in each individual wiring kit identifies a specific terminal by a letter code that will correspond to the letter code on the terminals identified below. The terminals below are shown in actual size to help you identify the terminal required for each connection. The quantity supplied is listed below each terminal in parentheses. Many of the terminals in each individual sub kit are already installed on the wires. These terminals will be shown in the crimped configuration and will not have a letter code next to the terminal.
